

LISTING OF THE CLAIMS

The listing of claims will replace all prior versions, and listings of claims in the application:

1. (Currently Amended) A cabinet comprising:

a first side wall;

a first support member punched out of and extending from the first side wall such that a first opening is formed through the first side wall adjacent the first support member, wherein the first support member includes a straight first leg extending perpendicular to the first side wall and a straight second leg extending perpendicular from the first leg spaced from and substantially parallel to the first side wall, the second leg includes first and second linear portions and a rounded portion extending between said first and second linear portions and a hemispherical dimple with rounded edges punched in a straight portion of the second leg, wherein said dimple extends toward said first opening; ~~and a plurality of circular openings formed in a flange located at a second end of the first side wall;~~

a second side wall positioned opposite the first side wall;

a third wall interconnecting the first and second side walls;

a base wall interconnecting the first, second and third walls[; and];

a second support member punched out of and extending from a first end of the second side wall such that a second opening is formed through the second side wall adjacent the second support member, the second support member is positioned at substantially the same height from the base wall as the first support member on the first wall, the second support member includes a straight first leg extending perpendicular to the third wall and a straight second leg extending perpendicular from the first leg spaced from and at least substantially parallel to the third wall, the second leg of the second support member includes first and second linear portions extending perpendicular to said first leg and a rounded portion extending between said first and second portion and a hemispherical dimple with rounded edges formed in a straight portion of the second

leg, wherein said dimple extends toward said second opening; and a plurality of circular openings formed in a flange located at a second end of the second side wall; and

~~a removable shelf including a planar surface and a first flange depending from the planar surface, the first flange includes a circular opening extending completely through said first flange dimensioned to receive the rounded edges of said dimple of the first support member on the first side wall when the first flange is received between the second leg of the first support member and the first side wall, and the shelf includes a second flange depending from the planar surface, the second flange includes a circular opening extending completely through said second flange dimensioned to receive the rounded edges of the dimple of the second support member when the second flange is received between the second leg of the second support member and the second side wall;~~

a third support member punched out of and extending from the third wall such that a third opening is formed through the third wall adjacent the third support member, the third support member includes a straight first leg extending perpendicular to the third wall and a straight second leg extending perpendicular from the first leg spaced from and substantially parallel to the third wall, the second straight leg of the third support member includes first and second linear portions and a rounded portion extending between the first and second portion and a hemispherical dimple having rounded edges extending towards an inner surface of the third side wall, ~~wherein one of said plurality of circular openings formed in said flanges located at said second ends of said first side wall and said second side wall receives the rounded edges of the dimple of the third support member on the third side wall when the flange of one of the first and second side walls is received between the second leg of the third support member and the third wall;~~ and

a removable shelf including a planar surface and a first flange depending from one end of the planar surface and a second flange depending from an opposite end of the planar surface; a third flange depending from a third end of the planar surface and a fourth flange depending from a fourth end of the planar surface opposite the third flange; wherein each of said flanges of said shelf comprises at least one circular opening for receiving completely therethrough one of said dimples of one of said first,

second and third support members.

2-4. (Cancelled).

5. (Previously Presented) The cabinet of claim 1, wherein the first, second and third support members each have a rounded upper edge.

6. (Previously Presented) The cabinet of claim 1, wherein each of said first, second and third members is a lance.

7-8. (Cancelled).

9. (Original) The cabinet of claim 1, wherein said cabinet is fabricated from metal.

10.-13. (Cancelled).

14. (Previously Presented) The cabinet of claim 1, further comprising a support wall disposed between the first side wall and the second side wall in a first direction and the removable shelf and the base wall in a second direction.

15.-21. (Cancelled)
